

1 ABSTRACT OF THE DISCLOSURE

2 A tamper-resistant pest trap that has an outer housing that simulates a rock typically
3 found in a garden or landscape area around a residence or building. The outer housing is a
4 hollow structure with a removable holding tray located therein. Formed on the sides of the
5 outer housing are a first and second side tunnel that bend and curve inward from the sides of
6 the outer housing towards the center of the outer housing. Formed on the end of each side
7 tunnel is at least one pest opening which enables a pest to enter the outer housing inner
8 cavity. In one embodiment, a large opening is formed on the bottom surface of the outer
9 housing into which a holding tray may be securely placed. In another embodiment, the outer
10 housing includes a lid member pivotally attached to a bottom member with the holding tray
11 attached to a bottom member. Disposed inside the holding trap is a suitable poison or a trap.
12 An optional stake and hold-down chain attached to the outer housing is also provided to
13 prevent movement of the trap.
